DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 (formerly 41-43) are rejected under 35 U.S.C. 102(e) as being anticipated by Ma et al ('302).

Ma teaches the following claimed limitations as cited below:

In reference to claim 1 (41) a device comprising:

A gate oxide layer (layers 1311 and 115) over a semiconductive substrate, the gate oxide layer comprising silicon dioxide and having a thickness of about 5A (Col.1, lines: 50-55- 0.5 nm =5 A); the gate oxide layer having a N-enriched region which is only in an upper half of the gate oxide layer (Fig.4 –SiN occurs in layer 1311 and not 115);

At least one conductive layer over the gate oxide layer (Col.2, lines: 5-15); and

Source/drain regions within the semiconductive substrate; the source/drain regions being gatedly connected to one another by the conductive layer (Col.2, lines: 10-15).

Art Unit: 2813

In reference to claim 2 (42) wherein the conductive layer comprises conductively doped silicon (Col.2, lines: 50-55).

In reference to claim 3 (43) wherein the conductive layer comprises p-type conductively doped silicon (boron is p- type; Col.2, lines: 50-55).

Response to Arguments

Applicant's arguments filed 5/10/05 have been fully considered but they are not persuasive. Applicant argues that Ma fails to teach a gate dielectric having a thickness of 5 Angstroms or 0.5 nm- however this argument is not persuasive because Applicant's claim language uses an open-ended transitional element which allows for additional layers to be present. Moreover, Ma teaches a gate dielectric layer having a thickness of 0.5 nm or 5 Angstroms as claimed and therefore anticipates the Applicant's claim language.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

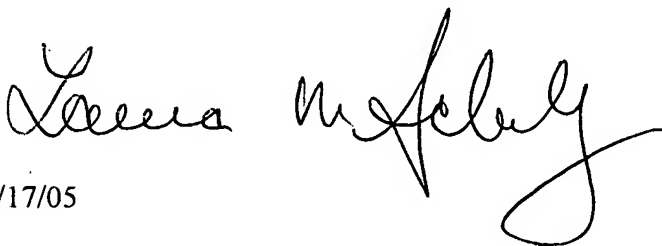

Art Unit: 2813

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
